Instructions/Tips on Attaching Documents

 The embedded buttons that allow a user to upload an attachment in response to a particular question will only take one document per button. If the user clicks the button again and attaches a second document, it will replace the first document.

- If the user wants to provide more than one document in response to a particular question, there are two ways to handle it:
 - ➤ Scan all the documents into one PDF file so that there is only one document to upload.
 - ➤ Load the first document using the embedded button, and load subsequent documents using the "Supporting Documentation" link at the bottom of any screen.

Ownership Chart

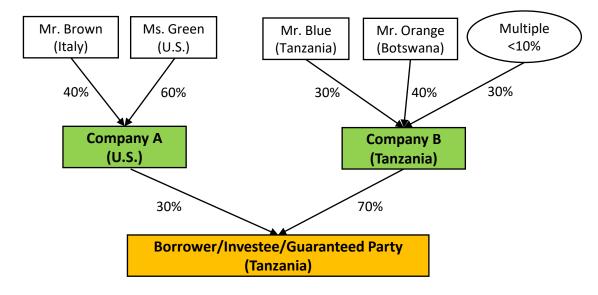

An Ownership Chart could be in the form of a table or a schematic.

Table Format

Name of Owner	Direct or Indirect Ownership	Country of Citizenship or Incorporation	% Ultimate Ownership
Company A	Direct	United States	30%
Mr. Brown	Indirect	Italy	12%
Ms. Green	Indirect	United States	18%
Company B	Direct	Tanzania	70%
Mr. Blue	Indirect	Tanzania	21%
Mr. Orange	Indirect	Botswana	28%
Multiple shareholders		Multiple	
<10%	Indirect	Countries	21%

- Notice that the Direct ownership adds up to 100%, and the Indirect Ownership adds up to 100%.
- Any entity/individual that owns (directly or indirectly) 10% or more is important because DFC needs to do Know Your Customer (KYC) due diligence on them.

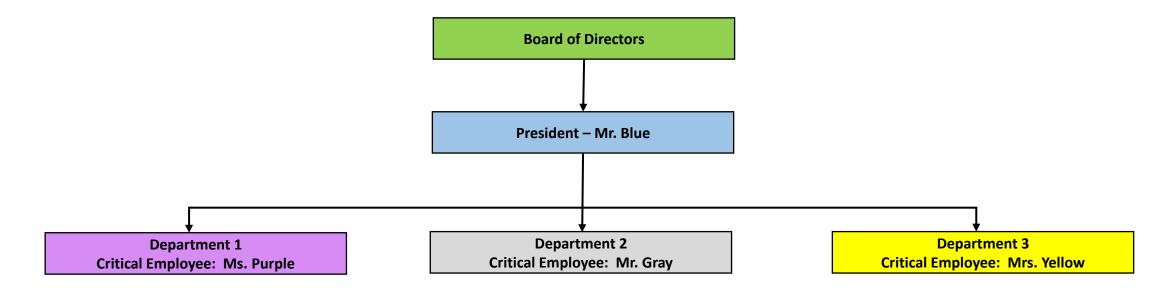

Schematic Format

The math is the same with this format. For example: Mr. Brown owns 40% of Company A, and Company A owns 30% of the Borrower/Investee/Guaranteed Party. 40% multiplied by 30% equals 12% ultimate indirect ownership by Mr. Brown.

Organizational Chart

An Organizational Chart does not need to show every employee. It should highlight corporate structures and individuals who are critical to the success of the DFC-supported transaction.

The people highlighted in this chart will most likely be the management team members whose experience/track record you will describe in Question 8 of this form.

Key Relationship Chart

Key Relationships may vary greatly depending upon the industry and the market.

Below are some common examples:
