Dr. Özgü Kasmer
Acting Head of Department at EU and Foreign Relations
(Email: ozgu.kasmer@csb.gov.tr)

Dear Minister Dr. Özgü Kasmer:

The U.S. Development Finance Corporation (DFC) is proposing to provide a loan to Ceyhan Polipropilen Üretim Anonim Şirketi (“Ceyhan Polypropylene”) for the development and operation of a polypropylene (PP) Project in Ceyhan (near Adana) (the “Project”). The Ceyhan Polypropylene Project is being developed by Sonatrach Petroleum Investment Corporation B.V. and RNS Ceyhan Petrokimya Endüstriyel Yatırım A.S. (a subsidiary of Rönesans Holding) (the “Project Sponsors”).

DFC is an agency of the United States Government with a mandate to encourage and support U.S. private sector investments in developing countries and emerging economies. All DFC-supported projects must be economically, environmentally, and socially sound. DFC is required by U.S. law to notify appropriate governmental authorities of investments under consideration for DFC assistance that have the potential to pose significant impacts to the environment and/or surrounding communities.

DFC also is required by U.S. law to provide your government with information about standards and guidelines that have been developed by international organizations and by federal environmental regulatory authorities of the United States and that are applicable to such projects. DFC applies guidelines and standards established by the World Bank Group and other similar international organizations. The web site links to these relevant guidelines are attached to this letter.

According to the documentation submitted by the Project Sponsors, the major environmental and social issues associated with the Project include the need for appropriate health and safety measures and a robust environmental and social management system for day-to-day aspects of the Project’s construction and operations. Potential hazards are associated with the handling of hazardous materials, fire, explosion, air emissions and their impact on ambient air quality, effluent discharges, waste (including hazardous waste) disposal, noise, releases to groundwater and marine waters, occupational, health and safety (OHS), labor management, traffic management, community health, safety, and security, and biodiversity.

Our analysis confirms that the Project has been designed to minimize social and environmental impacts. The Project will use internationally accepted environmental and social management practices to mitigate potential impacts to acceptable levels. Based on the information provided by the Project Sponsors, the Project will be properly managed so that it does not pose a significant hazard to the environment, public health, and worker safety.

We understand, of course, that the Project will be subject to the laws of Turkey with regard to the protection of the environment, public health, and safety.

If you have any questions about DFC's environmental and social assessment of this Project, you may contact Kate Dunbar, Assistant Vice President, Environmental and Social Analysis Group, at Katherine.Dunbar@DFC.gov.

Respectfully yours,

Elizabeth Boggs Davidsen
Vice President for Office of Development Policy
